

# We're Good, “No Lights Are On”

Or maybe not...

*The honest truth about ADAS calibrations is that they are not being taken seriously enough and it is ultimately placing driver's and pedestrians' lives at risk. We as an industry have to be better at servicing the technology of the future. Body shops, mechanical shops, glass shops, and even tire/alignment shops need to be aware of calibrations and be educated enough in order to avoid potential liability issues.*

## MYTH

**IF THERE ARE NO WARNING LIGHTS OR MESSAGES ON THE DASH,  
NO CALIBRATION IS NEEDED.**

---

## FALSE

*Any repairs and/or adjustments to a vehicle require calibration for an ADAS system to function properly. When an ADAS module is removed from its bracket or fixture then mounted again, this may not trigger a DTC (which initiates the warning lights on the dash). Recalibration ensures the ADAS module is positioned and accurately aiming as intended by the OEM. Some OEM's (Subaru being 1) require calibration when **ANY** bumper is removed.*

## MYTH

**IF I DON'T UNPLUG THE CAMERA OR RADAR SENSOR,  
NO CALIBRATION IS NEEDED**

---

## FALSE

*The OEMs clearly state, if the camera is removed from its bracket and reinstalled, the camera must be calibrated. Removing the camera from its bracket and letting the camera hang while the windshield is replaced does not mean the calibration is still OK. The position of the camera on the windshield has changed and even if the LDW (Lane Departure Warning) system still appears to function, the ABS (Automatic Emergency Braking System) may be severely limited.*

## MYTH

**THE SCAN TOOL SAYS CALIBRATION COMPLETED, SO IT MUST BE ACCURATE.**

---

## FALSE

*Calibration complete, does not mean the calibration is accurate. It simply means the camera recognizes something it believes to be a target. Only after an extensive test drive can it be determined if the calibration was accurate.*

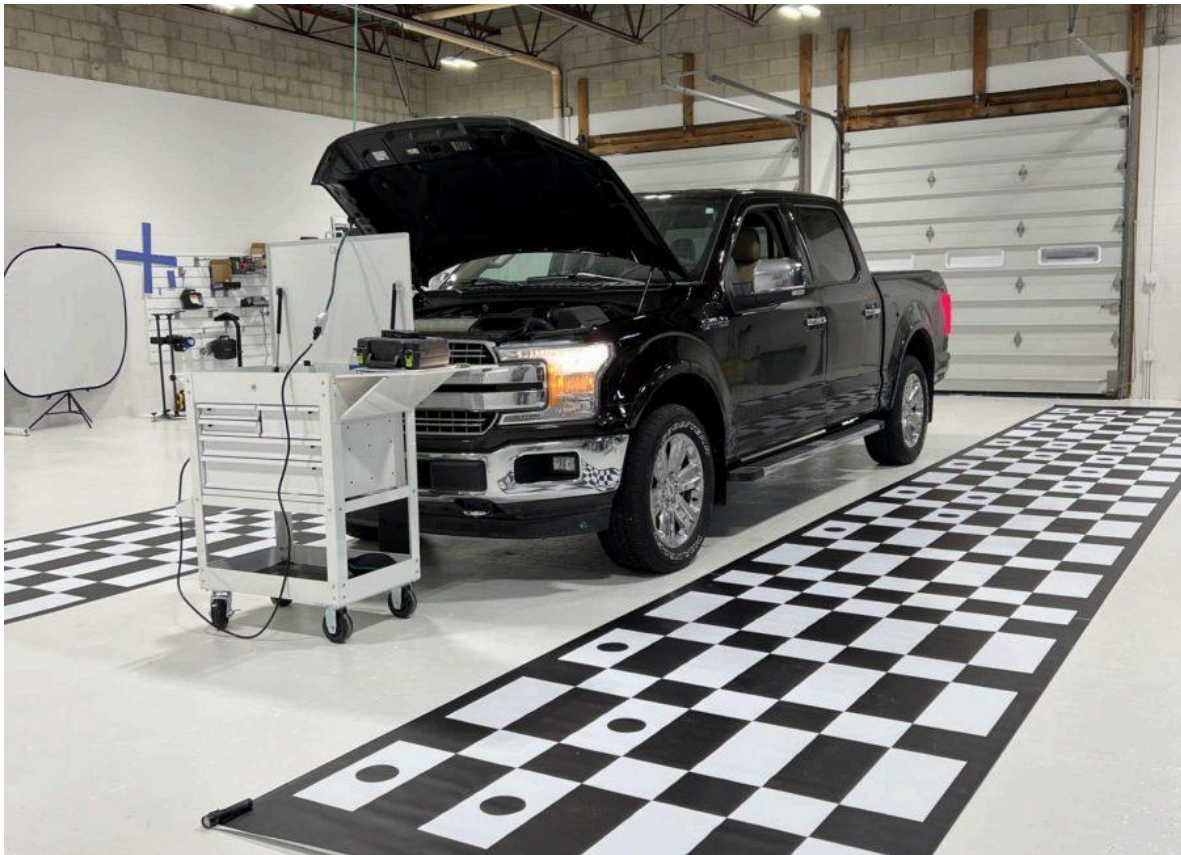

# PARTNER WITH US

---

Our ADAS solution enables your shop to yield numerous benefits that performing calibrations provides. You'll be able to return the vehicle to the customer with its ADAS systems performing as intended while generating significant financial returns with 0 overhead.

ADAS Solutions provides simplicity and convenience through electronic scheduling, pick-up, and delivery service. We never take up valuable space in your shop.

We offer short lead times, accurate, and efficient ADAS calibration services. This is due to our dedicated facility and our sole purpose of vehicle safety system diagnosis, repair, and calibration. IT'S ALL WE DO.
